

ByteMarket — Full-Stack E-Commerce Web Application

A complete online shopping simulation built with **Angular** on the frontend and **Django REST Framework** on the backend — demonstrating real-world integration through REST API and JSON data exchange.

Frontend

Angular SPA with routing, guards, and reusable components

Backend

Django REST Framework handling auth, data, and business logic

API Layer

REST endpoints with JSON exchange connecting both sides

Frontend Implementation

The Angular application is structured into logical, reusable modules—enabling clean navigation, protected routes, and a smooth user experience across all core pages.

Pages

Home, Login,
Products, Cart,
Orders

Routing & Guards

Auth guard
protects routes;
interceptor handles
token injection

Services & Components

Shared, reusable UI
layout with
encapsulated
service logic

Backend and Database Logic

Data Models

The backend is built on Django with DRF, managing all core entities and exposing clean REST endpoints. Serializers transform model data into JSON consumed by the Angular frontend.

User

Category

Product

CartItem

Order

Requirements Coverage & Demo Readiness

All core project requirements are implemented and the application is ready for a live demonstration.

Authentication Flow

Token-based login with protected routes via Angular auth guard

Product Browsing

Product list with category filtering powered by DRF endpoints

Cart & Orders

Full cart management, order creation, and order history views

GitHub & Live Demo

Repository with README, commit history, and a working live demo
